### **Hilleman Laboratories Expands into Maternal and Child Health; Plans to Develop a Novel Vaccine Against Group B Streptococcus**

**16<sup>th</sup> January 2020, New Delhi:** In a bid to strengthen its vaccine portfolio and expand into areas of unmet need, Hilleman Laboratories, a global research and development organization focused on delivering high-impact and affordable vaccines, announced today about plans to venture into the area of maternal and child health.

In this regard, Hilleman Labs is undertaking research and development of an effective and affordable vaccine against Group B Streptococcus to add a positive impact to women and children living in low middle-income countries.

*Streptococcus agalactiae* or group B streptococcus (GBS) is a leading cause of serious neonatal infections including septicaemia, pneumonia and less frequently meningitis, and urinary tract infections, chorioamnionitis, endometritis and bacteremia in women. GBS is an opportunistic commensal constituting a part of the intestinal and vaginal physiologic flora in almost 25% of healthy adult women. Maternal colonization is the principal route of GBS transmission. GBS converts from the asymptomatic mucosal carriage state to a major bacterial pathogen causing severe invasive infections.

As per 2017 WHO estimates, almost 18% pregnant women, totalling approximately 22 million, worldwide, carry GBS in all regions of the world; ranging from 11% in eastern Asia to 35% in the Caribbean. India is one of the top five countries for GBS carriage with more than 2.4 million pregnant women affected with the disease followed by China, Nigeria, United States of America and Indonesia.

Various studies have established that a maternal vaccine may prevent 231,000 infant and maternal GBS cases but, despite several vaccines to prevent GBS are in development, none is currently available in the market.

Dr Davinder Gill, CEO, Hilleman Laboratories, said, "Hilleman Labs has embarked on a project to develop a safe, effective and affordable vaccine against Group B Streptococcus. In this project, we will use our expertise in the conjugate vaccine technology in which we have substantial experience. We will design, assemble and test the vaccine within our R&D centre in India." We will pay close attention to Group B Streptococcus strains that are prevalent in India and South East Asia. Thereafter, we will partner with a vaccine manufacturing company for further development, manufacture and sale of the vaccine. Since there is currently no approved vaccine for Group B Streptococcus, our initiative is an important one for women and children living in low middle-income countries," he added.

Dr. Manoj Kumar, Senior Director-R&D at Hilleman Labs stated "Over the years, Hilleman Labs has demonstrated its expertise in the development of conjugate vaccines through our work on Hib as well as meningococcal conjugate vaccines utilizing novel cost-effective processes including a novel organic synthesis approach. Now, we would like to apply our knowhow in this area to produce an innovative vaccine against Group B Streptococcus and we are very excited about the opportunity".

Currently, patients who acquire Group B Streptococcus infections are prescribed antibiotics – which has resulted in the appearance of Group B Streptococcus strains that are drug resistant. The organization feels there is an urgent need to develop alternate solutions such as safe vaccines to prevent the threat of anti-microbial resistance (AMR)

**About Hilleman Laboratories:**

Hilleman Laboratories is a first-of-its-kind joint-venture partnership formed between MSD a global research-driven pharmaceutical organization and Wellcome Trust, a global charitable foundation dedicated to human and animal health by supporting the brightest minds. Hilleman Laboratories has been named after renowned scientist and father of modern vaccines Dr. Maurice Hilleman. His dedication to making a difference through the practical application of vaccine research and delivering vaccines to people in need forms the core mission of Hilleman Laboratories.

Hilleman Laboratories aims to become a global voice for vaccine development and access for public health in the developing world. For further information, please visit: [www.hillemanlabs.org](http://www.hillemanlabs.org)
